Subject index

Volume 104 (2000)

Acyl-dihydroxyacetonephosphate; Phospholipase D; Phospholipase C; Acyl-phosphatidylglycerol; Acyl-phosphatidyldihydroxyacetone; Acyl-*rac*-glycerophosphate **104**, 175

Acyl-phosphatidyldihydroxyacetone; Phospholipase D; Phospholipase C; Acyl-phosphatidylglycerol; Acyl-*rac*-glycerophosphate; Acyl-dihydroxyacetonephosphate **104**, 175

Acyl-phosphatidylglycerol; Phospholipase D; Phospholipase C; Acyl-phosphatidyldihydroxyacetone; Acyl-*rac*-glycerophosphate; Acyl-dihydroxyacetonephosphate **104**, 175

Acyl-*rac*-glycerophosphate; Phospholipase D; Phospholipase C; Acyl-phosphatidylglycerol; Acyl-phosphatidyldihydroxyacetone; Acyl-dihydroxyacetonephosphate **104**, 175

Adhesion; X-ray diffraction; Calorimetry; Polyphenol **104**, 67

Alkyl glycopyranosides; Thermotropic liquid crystals; Lyotropic liquid crystals; Phase transitions; Glycolipids **104**, 75

Anandamide; *N*-Acylethanolamine; 2-Monoacylglycerol; 2-Arachidonoylglycerol; Mass spectrometry; Rat organs; JB6 P^+ cells **104**, 185

Apolipoprotein A-I; High density lipoproteins; Molecular dynamics; Non-radiative energy transfer; Protein–lipid interactions; Reconstituted HDL **104**, 161

2-Arachidonoylglycerol; *N*-Acylethanolamine; Anandamide; 2-Monoacylglycerol; Mass spectrometry; Rat organs; JB6 P^+ cells **104**, 185

Area per molecule; β-Cyclodextrin; Dipole moment; Monomolecular film desorption; Oxidized free fatty acid; Surface pressure **104**, 93

Atropine; Interdigitated bilayer structure; Gramicidin A **104**, 207

Calcium-release channel; [^{3}H]Ryanodine binding; Sarcoplasmic reticulum; Dihydrosphingosine; Phytosphingosine; *N*,*N*-dimethylsphingosine **104**, 1

Calorimetry; Adhesion; X-ray diffraction; Polyphenol **104**, 67

Channel formation; Phospholipid vesicle membrane; Rhodamine; Fluorescence correlation spectroscopy; Lipid-peptide molecular interaction; Melittin; Magainin; Vesicle membrane breakage **104**, 35

β-Cyclodextrin; Area per molecule; Dipole moment; Monomolecular film desorption; Oxidized free fatty acid; Surface pressure **104**, 93

Deuterium NMR spectroscopy; Sucrose octapalmitate; Solid state molecular motion **104**, 23

1,3-Diacylglycero-2-phosphocholines; Inhibition; Liposomes; Micelles; Phospholipase D; Synthesis **104**, 57

Digalactosyldiacylglycerol; Galactolipid; Lipase; Lipid modification **104**, 13

Dihydrosphingosine; [^{3}H]Ryanodine binding; Calcium-release channel; Sarcoplasmic reticulum; Phytosphingosine; *N*,*N*-dimethylsphingosine **104**, 1

Dipole moment; Area per molecule; β-Cyclodextrin; Monomolecular film desorption; Oxidized free fatty acid; Surface pressure **104**, 93

EPR; Stratum corneum; Membrane fluidity; Phase transition **104**, 101

Fluorescence correlation spectroscopy; Phospholipid vesicle membrane; Rhodamine; Lipid-peptide molecular interaction; Melittin; Channel formation; Magainin; Vesicle membrane breakage **104**, 35

PII: S0009-3084(99)00135-8

Free radicals; Phosphatidylcholine; Lipid peroxidation; Kinetics **104**, 49

FRET probes; Lipid microdomains; Lipid phase separation; Membrane structure **104**, 113

Galactolipid; Digalactosyldiacylglycerol; Lipase; Lipid modification **104**, 13

Glycolipids; Alkyl glycopyranosides; Thermotropic liquid crystals; Lyotropic liquid crystals; Phase transitions **104**, 75

Glycolipids; Lipid polymorphism; Supramolecular aggregates; Micelles; Vesicles; Spin labels **104**, 193

Gramicidin A; Atropine; Interdigitated bilayer structure **104**, 207

High density lipoproteins; Apolipoprotein A-I; Molecular dynamics; Non-radiative energy transfer; Protein–lipid interactions; Reconstituted HDL **104**, 161

[^{3}H]Ryanodine binding; Calcium-release channel; Sarcoplasmic reticulum; Dihydrosphingosine; Phytosphingosine; *N*,*N*-dimethylsphingosine **104**, 1

Hyaluronic acid-linked phosphatidylethanolamine; Low density lipoprotein; Peroxidation; Hyaluronic acid **104**, 149

Hyaluronic acid; Low density lipoprotein; Peroxidation; Hyaluronic acid-linked phosphatidylethanolamine **104**, 149

Inhibition; 1,3-Diacylglycero-2-phosphocholines; Liposomes; Micelles; Phospholipase D; Synthesis **104**, 57

Interdigitated bilayer structure; Atropine; Gramicidin A **104**, 207

JB6 P$^+$ cells; *N*-Acylethanolamine; Anandamide; 2-Monoacylglycerol; 2-Arachidonoylglycerol; Mass spectrometry; Rat organs **104**, 185

Kinetics; Phosphatidylcholine; Lipid peroxidation; Free radicals **104**, 49

Lipase; Galactolipid; Digalactosyldiacylglycerol; Lipid modification **104**, 13

Lipid hydrolysis; Liposome; Nuclear magnetic resonance; Lipid oxidation; Serum–liposome interaction **104**, 133

Lipid microdomains; Lipid phase separation; Membrane structure; FRET probes **104**, 113

Lipid modification; Galactolipid; Digalactosyldiacylglycerol; Lipase **104**, 13

Lipid oxidation; Liposome; Nuclear magnetic resonance; Lipid hydrolysis; Serum–liposome interaction **104**, 133

Lipid-peptide molecular interaction; Phospholipid vesicle membrane; Rhodamine; Fluorescence correlation spectroscopy; Melittin; Channel formation; Magainin; Vesicle membrane breakage **104**, 35

Lipid peroxidation; Phosphatidylcholine; Kinetics; Free radicals **104**, 49

Lipid phase separation; Lipid microdomains; Membrane structure; FRET probes **104**, 113

Lipid polymorphism; Glycolipids; Supramolecular aggregates; Micelles; Vesicles; Spin labels **104**, 193

Liposome; Nuclear magnetic resonance; Lipid oxidation; Lipid hydrolysis; Serum–liposome interaction **104**, 133

Liposomes; 1,3-Diacylglycero-2-phosphocholines; Inhibition; Micelles; Phospholipase D; Synthesis **104**, 57

Low density lipoprotein; Peroxidation; Hyaluronic acid; Hyaluronic acid-linked phosphatidylethanolamine **104**, 149

Lyotropic liquid crystals; Alkyl glycopyranosides; Thermotropic liquid crystals; Phase transitions; Glycolipids **104**, 75

Magainin; Phospholipid vesicle membrane; Rhodamine; Fluorescence correlation spectroscopy; Lipid-peptide molecular interaction; Melittin; Channel formation; Vesicle membrane breakage **104**, 35

Mass spectrometry; *N*-Acylethanolamine; Anandamide; 2-Monoacylglycerol; 2-Arachidonoylglycerol; Rat organs; JB6 P$^+$ cells **104**, 185

Melittin; Phospholipid vesicle membrane; Rhodamine; Fluorescence correlation spectroscopy; Lipid-peptide molecular interaction; Channel formation; Magainin; Vesicle membrane breakage **104**, 35

Membrane fluidity; Stratum corneum; EPR; Phase transition **104**, 101

Membrane structure; Lipid microdomains; Lipid phase separation; FRET probes **104**, 113

Micelles; 1,3-Diacylglycero-2-phosphocholines; Inhibition; Liposomes; Phospholipase D; Synthesis **104**, 57

Micelles; Glycolipids; Lipid polymorphism; Supramolecular aggregates; Vesicles; Spin labels **104**, 193

Molecular dynamics; Apolipoprotein A-I; High density lipoproteins; Non-radiative energy transfer; Protein–lipid interactions; Reconstituted HDL **104**, 161

2-Monoacylglycerol; *N*-Acylethanolamine; Anandamide; 2-Arachidonoylglycerol; Mass spectrometry; Rat organs; JB6 P^+ cells **104**, 185

Monomolecular film desorption; Area per molecule; β-Cyclodextrin; Dipole moment; Oxidized free fatty acid; Surface pressure **104**, 93

***N*-Acylethanolamine**; Anandamide; 2-Monoacylglycerol; 2-Arachidonoylglycerol; Mass spectrometry; Rat organs; JB6 P^+ cells **104**, 185

***N*,*N*-dimethylsphingosine**; [^{3}H]Ryanodine binding; Calcium-release channel; Sarcoplasmic reticulum; Dihydrosphingosine; Phytosphingosine **104**, 1

Non-radiative energy transfer; Apolipoprotein A-I; High density lipoproteins; Molecular dynamics; Protein–lipid interactions; Reconstituted HDL **104**, 161

Nuclear magnetic resonance; Liposome; Lipid oxidation; Lipid hydrolysis; Serum–liposome interaction **104**, 133

Oxidized free fatty acid; Area per molecule; β-Cyclodextrin; Dipole moment; Monomolecular film desorption; Surface pressure **104**, 93

Peroxidation; Low density lipoprotein; Hyaluronic acid; Hyaluronic acid-linked phosphatidylethanolamine **104**, 149

Phase transitions; Alkyl glycopyranosides; Thermotropic liquid crystals; Lyotropic liquid crystals; Glycolipids **104**, 75

Phase transition; Stratum corneum; EPR; Membrane fluidity **104**, 101

Phosphatidylcholine; Lipid peroxidation; Kinetics; Free radicals **104**, 49

Phospholipase C; Phospholipase D; Acyl-phosphatidylglycerol; Acyl-phosphatidyldihydroxyacetone; Acyl-*rac*-glycerophosphate; Acyl-dihydroxyacetonephosphate **104**, 175

Phospholipase D; 1,3-Diacylglycero-2-phosphocholines; Inhibition; Liposomes; Micelles; Synthesis **104**, 57

Phospholipase D; Phospholipase C; Acyl-phosphatidylglycerol; Acyl-phosphatidyldihydroxyacetone; Acyl-*rac*-glycerophosphate; Acyl-dihydroxyacetonephosphate **104**, 175

Phospholipid vesicle membrane; Rhodamine; Fluorescence correlation spectroscopy; Lipid-peptide molecular interaction; Melittin; Channel formation; Magainin; Vesicle membrane breakage **104**, 35

Phytosphingosine; [^{3}H]Ryanodine binding; Calcium-release channel; Sarcoplasmic reticulum; Dihydrosphingosine; *N*,*N*-dimethylsphingosine **104**, 1

Polyphenol; Adhesion; X-ray diffraction; Calorimetry **104**, 67

Protein–lipid interactions; Apolipoprotein A-I; High density lipoproteins; Molecular dynamics; Non-radiative energy transfer; Reconstituted HDL **104**, 161

Rat organs; *N*-Acylethanolamine; Anandamide; 2-Monoacylglycerol; 2-Arachidonoylglycerol; Mass spectrometry; JB6 P^+ cells **104**, 185

Reconstituted HDL; Apolipoprotein A-I; High density lipoproteins; Molecular dynamics; Non-radiative energy transfer; Protein–lipid interactions **104**, 161

Rhodamine; Phospholipid vesicle membrane; Fluorescence correlation spectroscopy; Lipid-peptide molecular interaction; Melittin; Channel formation; Magainin; Vesicle membrane breakage **104**, 35

Sarcoplasmic reticulum; [^{3}H]Ryanodine binding; Calcium-release channel; Dihydrosphingosine; Phytosphingosine; *N*,*N*-dimethylsphingosine **104**, 1

Serum–liposome interaction; Liposome; Nuclear magnetic resonance; Lipid oxidation; Lipid hydrolysis **104**, 133

Solid state molecular motion; Sucrose octapalmitate; Deuterium NMR spectroscopy **104**, 23

Spin labels; Glycolipids; Lipid polymorphism; Supramolecular aggregates; Micelles; Vesicles **104**, 193

Stratum corneum; EPR; Membrane fluidity; Phase transition **104**, 101

Sucrose octapalmitate; Solid state molecular motion; Deuterium NMR spectroscopy **104**, 23

Supramolecular aggregates; Glycolipids; Lipid polymorphism; Micelles; Vesicles; Spin labels **104**, 193

Surface pressure; Area per molecule; β-Cyclodextrin; Dipole moment; Monomolecular film desorption; Oxidized free fatty acid **104**, 93

Synthesis; 1,3-Diacylglycero-2-phosphocholines; Inhibition; Liposomes; Micelles; Phospholipase D **104**, 57

Thermotropic liquid crystals; Alkyl glycopyranosides; Lyotropic liquid crystals; Phase transitions; Glycolipids **104**, 75

Vesicle membrane breakage; Phospholipid vesicle membrane; Rhodamine; Fluorescence correlation spectroscopy; Lipid-peptide molecular interaction; Melittin; Channel formation; Magainin **104**, 35

-Vesicles; Glycolipids; Lipid polymorphism; Supramolecular aggregates; Micelles; Spin labels **104**, 193

X-ray diffraction; Adhesion; Calorimetry; Polyphenol **104**, 67
